SUMMARY

Software Engineer building production **AI/ML platforms, MLOps** pipelines, and observability systems.
PhD in Computational Science with **80+ publications, 2 book chapters**, and **1600+ citations** (**Google Scholar**); founder of **SlickML**, an open-source organization for MLOps and AI tools. Targeting **MLOps / AI Engineer** roles.

EXPERIENCE

RIVIAN & VOLKSWAGEN GROUP TECHNOLOGIES | STAFF SOFTWARE ENGINEER

November 2024 – May 2026 | Palo Alto, CA (Remote)

- Led the rollout of **ConvoHealth**, the observability stack for **Rivian Voice Assistant**, scoring all in-cabin **LLM** calls via **LLM-as-a-judge**; scaled the assistant from **3.5K** to **85K**, then **150K** vehicles.
- Drove **Databricks Asset Bundles (DABs)** adoption across Rivian and RV-Tech with **10+** cookiecutter templates and platform best practices spanning **MLflow**, Model Serving, and the broader Databricks stack.
- Designed **data-ai-hub**, a Python/Terraform monorepo for libraries, apps, and services on the Databricks platform (**200+** MAU), with leaf-based **CI/CD** across GitLab workflows and in-house toolchains for linting, formatting, type checking, and unit/integration tests.
- Built shared Python libraries (logging, Databricks, MLflow, PySpark) that standardized engineering practices across **10K+** users.

RIVIAN AUTOMOTIVE | STAFF DATA SCIENTIST, ALGORITHMS

September 2021 – November 2024 | Palo Alto, CA (Remote)

- Stood up **AI/ML** platform architecture (**ZenML**, **Kubeflow**, **MLflow**) across Enterprise Technology (ET) and Digital Manufacturing Engineering (DME), including factory data systems and an automated shop decision-making platform.
- Productionized **Process-Health**—anomaly detection and **SPC** for non-stationary processes in battery and drive-unit shops—with Slack, PagerDuty, and email alerts to surface impacted parts and vehicles during containments.
- Authored a **ZenML/Snowpark UDF** ETL path for factory test-station results whose nested formats could not be transformed via dbt ELT.
- Delivered **LineConfig** for the Enduro drive-unit shop ramp.
- Deployed **Battery Submodule Thermography**, an on-edge **Physical AI** model to flag anomalous laser welds on the submodule line.
- Maintained the Factory-Data GitLab Cloud repository (apps, templates, services); published **10+** internal Python libraries and DME-wide coding standards with automated lint, test, docs, and CI templates for lint/test/build/publish/deploy.

EXXONMOBIL CORPORATION | SENIOR DATA SCIENTIST

January 2020 – September 2021 | Houston, TX

- Owned the **PE** attrition model for **EMCC**, forecasting customer churn with statistical significance to inform contract negotiations during COVID-era demand shocks.
- Introduced **Dynamic Revenue Management (DRM)**, an interpretable rules-based pricing model for **HDPE** and **LLDPE** (CANUSA) that segmented customers and recommended monthly prices to maximize variable margin—**\$90M** revenue impact.
- Constructed a transaction-specific pricing model for **PP** across the Americas, using clustering and machine learning to recommend margin-maximizing prices.
- Supervised junior data scientists on the HDPE/LLDPE and PP pricing systems, contributing **\$41M** in additional revenue in H1 2021.

ORACLE (FORMERLY CERNER CORPORATION) | DATA SCIENTIST

October 2018 – December 2019 | Kansas City, MO

- Shipped a **BPCI-A** model for **NaviHealth** covering **32** CMS-defined episodes, with prospective reimbursement to improve cost transparency and reduce waste.
- Created 30-day pediatric all-cause readmission models for **10** U.S. health systems (CHOC, Intermountain, Memorial Hermann, and others) on **Spark/AWS**.
- Implemented a 90-day pediatric asthma readmission model for **CHOC**.

MYNOMX INC. (ACQUIRED BY 1HEALTH.IO) | DATA SCIENTIST

June 2017 – August 2018 | Palo Alto, CA

- Applied statistical methods and ML algorithms to Stanford and UK Biobank data for **risk assessment** and **population health** applications.
- Engineered datasets and pipelines for operational analysis, then scaled models on **Spark/MLlib** for large healthcare databases.

EDUCATION

FLORIDA STATE UNIVERSITY PHD, COMPUTATIONAL SCIENCE (ML)

2015 – 2018 | Tallahassee, FL • GPA: 3.969/4.0

FLORIDA STATE UNIVERSITY MSc, COMPUTATIONAL SCIENCE (ML)

2015 – 2017 | Tallahassee, FL • GPA: 4.0/4.0

UNIVERSITY OF AKRON MSc, PHYSICS (COMPUTATIONAL)

2013 – 2015 | Akron, OH • GPA: 3.982/4.0

UNIVERSITY OF TEHRAN BSc, PHYSICS

2006 – 2010 | Tehran, Iran • GPA: 3.1/4.0

SKILLS

MLOps / AI: Databricks • DABs • MLflow • Model Serving • Feature Store • ZenML • K8s / Kubeflow • LLMs • RAG • LLM-as-a-judge • PEFT • PyTorch • Hugging Face • Physical AI / on-device • Ray • CI/CD • Datadog / Grafana
Data / Cloud: Databricks • Spark • SQL • AWS • Azure • Terraform • dbt
Engineering: Python • Go • Git / GitLab / GitHub • TDD • Bash • Linux • Docker
